

## Student's Feedback from YouTube

*"Learning shall be fun, it is a stepping stone for your success in life"*

*~Chan~*

## STUDENT'S FEEDBACK IN TEACHING AND LEARNING OF PHARMACEUTICAL SUBJECT

### 1<sup>st</sup> Element: Customized Flipped classroom

Please give your feedback on the customized flipped classroom teaching.	
Good explanation and interactive	
ありがとう	
I find it much less stressful with flipped classroom as I can review the lecture any time. In class, any doubts regarding the lectures are answered and the homework given helps understanding the concept better. She has no problem re explaining in different words too.	
Not bad	
The teaching is clear and interesting	
ok	
The pre-class material prepared is good but it's very dull and dry. It's hard for me to finish the whole video at a single play. Every times when I finish watching the video I will get headache.	
very good	
Very good	
It is better if the lecturer can attract all the students to get involved during the discussion in the class, not only involving only certain group of students.	
good initiative, more suitable and effective teaching method	
Well-organised in the flipped classroom, but still needs some work in the actual class, especially in dealing with and giving questions.	
Can be improved. Sometimes lack of explanation during video.	
In my point of view, flipped classroom is not to say is bad but yet it has disadvantages. For examples, if students are not managed to watch the videos before lectures or maybe they watched but don't understand, then he or she definitely will not understand the content and stay blank in their mind. If they ask questions in class, and lecturers need to answer one by one or explain the whole thing again, then why not we just use the time to deliver the lectures conventionally so that majority can understand the concepts and only ask questions for the minor one maybe. Lastly, if student watch the videos and understand on their own, sometimes they might think they understand but in fact, they might understand the wrong concepts because no further explanation is given on that particular things for example.	
Videos uploaded are very good. But I am not disciplined to watch videos before going to lectures.	
Good	
Making animation for pre class material maybe painstaking but can attract student attention.	
Good teaching. Please create more attractive slides.	
Very comprehensive.	
Just like i mentioned above but over all, she's okay because she's funny.	
Good	
Good	
improvement is needed	
Good	
Fine	

*"Learning shall be fun, it is a stepping stone for your success in life"*

Perfect
Its already good but somehow more time should be allocated for the lesson because many student want to ask.
Systematic and always willing to help students
I had slowly used to her way of teaching using flipped classroom
Good. A very dedicated lecturer.
It's okay, I'm just lazy and I have a very short attention span
Good
It is very interesting and helpful.
You are good :)
Pretty good.
Dr Chan's effort in making flip classroom is commendable. However, it would be even better if the lectures are to be made more interesting.
I think the videos and the reading materials provided are sufficient for me to have a concept and some understanding about the lectures. In the class, her explanation for the questions raised by students are clear and I am able to understand better. ^^
Overally still okay, can be improved
i like the way you explain. but can we have more exercises
She explains more and i can understand well
dr chan is very good in conducting flipped classroom,clear in explaining our doubts
Not bad
Useful n somewhat different from others.
Good,explain the lecture clearly.
No
Ok
If the video given too long, maybe can cut it into sections so that student dont feel the video is too long for them.
She is sporting and good enough on her teaching
No.
👍
Well played!
Well played!
Nice and interesting.
Not bad
She is quite good in teaching but with the traditional classroom method
So far so good.
Overall it is quite good
Easy to understand hehe thank you (:
Interesting

*"Learning shall be fun, it is a stepping stone for your success in life"*

Dr. Chan's teaching is not difficult to understand. However, it would be preferable if she can illustrate the drawings better and neat.

Good teaching

The teaching style may be excellent for certain students, but for someone who doesn't like Physics and still can't accept flipped classroom, it is still a misery for that student.

It is good to have flipped classroom . But I want the complete notes or slides instead of videos . Because some of ur slides are blank . It is my first time of flipped classroom and I find it very useful

I have no comment but impress with the effort

Your teaching is good .

admire her enthusiasm in teaching and willing to strive for a change in teaching.

teaching is okay

Very effective

I'd like Dr Chan to slow down a bit while teaching.

No

Ok

Good

good. please recommend to all lecturers. so that they will just lecture about important things and we can rplay every explanations as many times as we want untill we understand. if we have questions, we can ask later

good. please recommend to all lecturers. so that they will just lecture about important things and we can rplay every explanations as many times as we want untill we understand. if we have questions, we can ask later

Her teaching is great, but some slides she just read without explaining which makes me confused.

I feel she genuinely cares for her student when teaching, by letting us be independent in our learning as well as guiding us sincerely.

good

Good explanation but sometimes could not understand some words spoken.

good

I think her flipped classroom is good and maybe can have a question.

good. need more explanation during lecture

Excellent

Good

Please comment on his/her teaching.

Good

I think that her teaching way is effective to me :D

very good..i hope other lecturer do the same thing..because i can replay it many times as i want

The way Dr.Chan explains the concepts are easy to understand

Keep up the good work dr chan 😊

Madam Chan good, teaching materials okay so this method works pretty well

*"Learning shall be fun, it is a stepping stone for your success in life"*

*~Chan~*

Very good and ease our learning
Over creative with flipped classroom and not much time for discussion
I think Dr did her very best to teach us through video, every part of the chapter she explained in detail and it wouldn't be that detail if it is an hour lecture.
It was nice and simple yet easily to understand the topics being taught.
It's a good approach ,hopefully can continue by using this method
Thanks for putting effort in teaching us. For the topics in FAR 323 is quite suitable for using this method as we can evaluate our learning during the discussion in lecture.
Great job for Dr. Chan. Just a minor things to be improved on then it will be good. The minor thing is avoid having one hour discussion for so many lectures at once. It would be good if every lecture has one hour discussion each. It would strengthens us more and we can have more time allocated to ask question. Otherwise, too many lectures in one hour will make us have no chance to ask about other lectures due to time.
A good way in presenting flipped classroom. Clear concept communicated in materials provided and during tutorials.
good
I love Dr Chan's way of teaching. Continue the flipped classroom!! I likeee!!
Her slides were simple, and when she presents, it's very straight forward and understandable.
Just nice.
Good. I understand well and her teaching is fun and detailed.
Not all students can do this kind of learning..please consider since the result of quiz can show it
It was my first experience on flipped classroom and I really find it convenient especially during revision but please add more time during the discussion so that we can ask questions about things we dont understand. Thank you Dr. Chan🙏
Overall i appreciate it and i found those videos very useful
New way of teaching and learning
Very good. Truly Appreciate. Thank you.
Thank you for bringing up this in a way that make me change my view toward flipped classroom that is carried out by some other lecturer! A big thumb up from me!
Repeating is a good way of impressing us with the things that u want to teach us, and try to link to application of daily life.
The lecture notes are quite simple and difficult to be understood.
Good
Dr, actually I think the way u flip class room is consider good but about the lecturer reading material, I mean the video. Anyway, Dr, I would like to say sorry to you if I have miss say something, and also thank you for implementing flip class room to let us to expose to a new learning way. Thanks!
Well done
I like the way she conducted. Please remain as that and I do enjoy it! TQ
Very effective in stimulating thinking process.
Keep it up
Cheer up. Keep going.
I'm a new user to flipped classroom. Although had experience a few flipped classroom, this might be the best.

*"Learning shall be fun, it is a stepping stone for your success in life"*

Your lecture videos were really good, easy to understand. It would be nice if you can add some application questions at the end of the lecture to stimulate our understanding and memory a little more. Thanks!
Nice try and keep up the good work!
Good and I can understand well. Thanks :)
My first time experience, and it was a fun learning process. Being able to learn the lecture on my pace, was the best part. I hope the audio can be made clearer and the speaking to sync with the pointer. Otherwise, I trully appreciate Dr's effort in this.
Understandable
Overall is good.
Quite good. I like it because it's not a burden for students. Sometimes, she explains really well for students.
Good
Dr Chan is a good lecturer and I prefer if she can prepare more questions to discuss together in class. She also answered our questions regarding to the parts that we don't understand or are confused of. more questions pls.
Overall good
Clear and detailed explanation provided.
Short and sweet lectures and students are able to understand. Great efforts being put in and always seeking for improvement.
She's a good lecturer
-
Overall is quite good but we have no much time to ask question regarding the lectures
I like the way Dr. explain in the videos posted before.
Overall is quite good but we have no much time to ask question regarding the lectures
No
The topics that Dr teach is good and synchronised with flipped classroom method. Animation in video that might ease understanding might help more. Thank you Dr!
Dr chan flip classroom is quite good. Other lecturers...thats just too burden, since we not only have one subject study.. making videos and doing the assignment or homeworks will spend a lot of our study time..
Teaching is clear, generally did her best for this two way teaching already. But another half needs student's cooperation.
It is a new learning style for us compared to the traditional way of teaching and I personally prefer this kind of teaching. I hope that we can have more practice in the class.Thank you Dr for preparing this :)
It is very fun and enjoyable.
Good that the pre lecture material is sufficient and its clear to e understood
The teaching is good.
satisfying
good
is a very interesting and helpful flipped class learning
Very straightforward.

*"Learning shall be fun, it is a stepping stone for your success in life"*

Pls upload the materials early. Do not upload the materials early in the morning of the lecture day.
Nice
Innovative
good as compared to others lecturer
Very good because she explains everything very well and i can replay it anytime :)
We could understand easily after watching the pre-materials
good
perfectly good style in teaching
Excellent!
Her teaching is okay and easy to understand
Okay, but still can be improved
She speaks so slow and her video doesnt even clearly explain everything!
Actually, Dr Chan explain quite clearly in the videos. However, discussion in class is sometimes quite confusing and ineffective.
I think Dr Chan has done a very successful job in doing her flipped classroom. What i love the most is, her videos explaining the lecture notes and its in simple way and full with information and ofcourse i can rewatch the videos anytime (Especially in study week).. I think if we want to apply Flipped classroom in our course, it must be standardise... Cause few lecturers are doing flipped classroom too, but the way they do, are quite complex and hard to understand.. Then i will be become lazy to do it.
Good
Her teaching is good but maybe I'm a conservative student so I'll be more used to learning in the classroom.
ok lah
a simple, easy and convenient way of doing flipped class learning.
Her teaching material is very good and clear enough. Dr Chan's way of flipped classroom enable us to learn the teaching material in a stress free way and schedule our time accordingly. I hope other lecturer can learn her way of teaching.
Good initiative but lack cooperation from students.

*“Learning shall be fun, it is a stepping stone for your success in life”*

## 2<sup>nd</sup> Element: Video tutorial for Practical

<b>What is your advice to lecturer who would like to use the video tutorial tools in their practical?</b>	<b>What is your advice to students who will be taught through the video tutorial tools?</b>
<b>Please make the video, audio and subtitles clear without any external noises.</b>	Please take the time to watch the video before entering the class as it will alleviate your understanding and imagination. You can even rewind, pause or replay the video which cannot be done if face-to-face teaching is conducted.
<b>Good</b>	Take initiative to watch the video
<b>No</b>	No
<b>None</b>	None
<b>no</b>	use the video as a learning tool to help
<b>Make sure the video is not too long. But the videos before this are just nice :)</b>	Make sure you guys make yourself ready to watch it, because there are many input that you'll get if you really focus. You can gain your confidence through the video, remember the steps (take note if needed). But remember, not by watching the video, then you'll be doing well in the practical. It's okay, it's all about learning process, just do your best and enjoy the practical!
<b>Hope that the lecturers can speak and explain it clearly</b>	it is a good medium for students to revise the subject and to have a better understanding.
<b>Provide subtitles</b>	Watch it
<b>Pls put subtitles</b>	Have initiative to watch the video
<b>Thanks for the video</b>	Students must watch it before entering the class
<b>make sure the audio is clear</b>	watch video tutorial before enter the class to get better understanding
<b>Put subtitles</b>	Continue with it
<b>Subtitle may be necessary</b>	Watch the video whenever you are free. Don't delay it.
<b>Good job and you are the best !</b>	Don't sleep and be more focused!
<b>Video is clear enough. The instruction is clear too.</b>	Take initiative to watch the video before entering the class or practical.
<b>Nothing much as all we want is just clear and a good quality video with proper content</b>	Take your own initiative and try to explore more
<b>It is a good way</b>	Try to understand the video content
<b>Show step by step clearly</b>	Appreciate it
<b>Use subtitles</b>	Be prepared to replay the video again and again because of unclear words
<b>Accurate and precise information must be learnt</b>	Be ready to learn new things
No comment. Everything is fine	Students should watch the videos! Really helpful!
Good video quality	Make the initiative to watch the video tutorial and appreciate it

*"Learning shall be fun, it is a stepping stone for your success in life"*

Good job	Appreciate
I hope the the lecturer will speak louder and Clearly as I'm facing the difficulties in understand. It will be better if have subtitles.	I hope the students will take initiative to watch the video repeatedly until they understand the lecture.
No advice	Watch it at least a few days and a few times before the class because it will take a long time to pick out every bit of information from the video
Please make sure the audio is clear	Please replay again and again
The video should be short and clear	Please spend some time to watch the video
A clearer video, with subtitles.	Self initiative is compulsory
Clear voice	Must watch before entering the class
Maintain audio quality and give subtitles	Make time to view the video
The video tutorial can be prepared in a more detailed manner.	Make good use of it.
Please make it available offline with subtitles. Thanks.	Please download and watch it to understand it clearly.
i would love if the video has subtitle	Enjoy learning with it.
Pronunciation must be accurate and clear with reduction on background noises.	Students need to spend some time to listen to the video.
Include subtitle	Jot down important points
-	Appreciate and use it for learning
Don't speak too fast	Copy notes not just merely listening to audio
Apart from teaching student skills, please emphasize on the theory also, so that student will understand it deeply	Take initiative to watch the video
if got audio, make it clear and audible. better if have subtitles. Give video in advance so student have plenty of time to view it	need to have initiative to view the video
lecturer should concern whether the topic is suitable for video tutorial and all the concepts are clearly shown and taught in the video	take initiative to watch,learn and ask questions if face any doubts
It is worth to try	Good
Use clear pronunciation	Take notes while watching the video
Shorten the video and add audio	.
Post a week before the flipclassroom lecture	Please watch the video
the method should be explain clearly	make sure watch video before coming to class
Video tutorial is just one of the good options in teaching but is not a replacement for the traditional way of teaching	Use the teaching materials wisely
Start now	Listen
Clear voice	Repeat the video many times
Make sure the voice is clear	Make sure they give their commitment by watching each of the videos
Short and try to as simple or clear cut as possible	Be self discipline

*"Learning shall be fun, it is a stepping stone for your success in life"*

Dont make the video to long	Must watch it and try to understand the video
Make it short as possible	Try new studying methods
Short and precise	Take initiative to watch the video
Post it before practical	Get the initiative to watch the video
Suggested that the video should be made interesting and detailed	Take the time to really understand the video and do not watch last minute
Do not think students have knew everything after enter practical.	Take initiative to watch.
Clearer angle of shooting the video. Slow demonstration.	Record while watching.
The video should be assisted by clear voice	Students should be more initiative in finding time to watch the video
Make sure the video shows all the methods correctly	Need to watch the video before coming to lab
Must have good quality video	Take note during watching video
show the clear method	you need to watch it immediately after it is uploaded
Use subtitle and ensure that the important information is highlighted	Maximise the use of video for learning
No 😊	I'm sorry no again 😊
Please include subtitles if possible, if not, then minimizing the background noise would help.	Watch it before tutorial or lecture will definitely improve your understanding.
Dont make the video too lengthy, insert subtitles	Repeat the video for times until you understand it
Dont make the video too lengthy, insert subtitles	Repeat the video for times until you understand it
The contents should be clear and easy to understand.	Students must take the initiative to watch the tutorials before class
This is an awesome style of learning and I hope that it continues on.	Watch and appreciate the video tutorials, they really help a lot.
Good attempt	Don't be overly dependent on it
Be clear and add subtitles	View it before lectures
Make sure the students view it	Make sure you watch the videos, it is helpful
Be clear when recording the video	Take time to understand
Speak clear with subtitles	Download the video and watch more than 1 times
Thanks and do take feedback from students to get know of any biases happened in video	We cannot learn all information in yhe video at once. Some might take time to adapt the informations. Be patient
Provide subtitle	Watch the video before tutorial
Video need to be clear	Don't procrastinate to watch the video.
Enhancing the audio quality and subtitle	Please be open towards another method of learning
Make sure it's well explained and understandable	Wa

*“Learning shall be fun, it is a stepping stone for your success in life”*

Make sure good quality of video tutorial is used and simple words to describe the process involve	Students should use this tool to improve their understanding and be prepared before enter practical class.
clear audio and visual	take your own time to watch the video
Reminds the student to watch the video before lecture and explain the activity that will happen during lecture	Watch the video many times
Make the video short and simple but at the same time it also can help the student during the practical sessions.	Please watch it. It will be really helpful for you.
Affirmative	Affirmative
It would be great	Find time to watch
Keep the video tutorial coming please	None
Its supportive for student to be more understand for what they will do in their practical, thus it can avoid any mistakes from happen	Replay the video as many as you want until you understand
Make it short and sweet	Enjoy learning
Keep it short and simple	Watch it until you understand what has to be done
Make sure the voice is clear	Take time to watch it
Be clear	Focus
Give more details in lab procedures or guide students to find extra reading. But the duration per video should not exceed 15 minutes.	Watch the video.
make more interesting	Always have internet
Make more fun	Watch the video before enter the class
keep up the good work :)	please watch the video or else you'll not catching up
If possible , post a week earlier before the practical start so that we can watch it several times before the practical	Watch it at least twice
Include subtitles and speak clearly	Listen attentively and listen when students are fresh n not in tired condition
Even better if add in subtitle	View it again and again
Make sure their voice is super clear and if possible add subtitle so that there wont be any misunderstanding.	Make sure u listen to what is said correctly in order to prevent any misunderstanding regarding the new topic.
It will be okay as long as the voice is clear and can be understand	Manage your time guys!
A lecturer's word pronunciation is important. In class, we can guess what the lecturer said exactly by seeing the lip movement and he expression showed by them. But in video, we cannot do that. We only can rely on the audio, if the audio is poorly recorded, it is extremely difficult for students to understand. However, I will still go for video learning as I'm a	Watch the video whenever you have time, don't drag until you have your exam yet you still haven't watch it. Because it is quite good.

*"Learning shall be fun, it is a stepping stone for your success in life"*

vision learner and video makes learning easier and interesting for me.	
no need to brief in detail during practical. save time.	dont be lazy to see the video.
Make sure that students watch the video	Be cooperative
Please give subtitles	Take initiative to watch it
Additional information or do's and don't while doing practical will be helpful	To watch more videos and jot down any questions to be asked to the lecturers
Add in english subtitle	There must be initiative to watch the video once it is released
Put something into the video to make it more interesting	You should have earphone for a better sound effect

*“Learning shall be fun, it is a stepping stone for your success in life”*

3<sup>rd</sup> Element: Edutainment

Please give any suggestion/comment about the edutainment in FAR323
Nice effort
A good approach! :)
Increase the payment higher would be better
I think it will be fun.
I'm excited for the day of presentation :)
Good
Awesome !
So far so good
The teaching approach is unique
I am entertained with his teaching methods, it prevents me from losing my focus and sleeping in the class
More indo song!
Stop doing this kind of project
It will be fun to learn in this way
Maybe we all should just record the performance and watch it during our own free time instead of using lecture hours to do the performance.
I think it's a unique approach to the teaching style and looking forward to the outcome and learning a lot from Prof Yuen :)
i think that this idea is quite new to us and look interesting to help student in learning.
I prefer if the kind of activity/ edutainment activity is done after the lecture being taught by lecturer. As I believe i will increase our understanding and make us easy to memorise what we have learn
Is a very good project
I like his old school teaching method. It actually makes me to concentrate in his class.
A less serious way to have fun in learning. Great.
It is fun
It was funnnnnnn and prof yuen was very sporting.
The momeries is still remain in my mind , till forever.
It was interesting, and I believe that the concept can continuously be improved by using more interactive platforms.
I wish the other lectures could adapt his idea
I like doing and discussing the theory behind the formula used. It helps me to remember.
I did enjoyed throughout the Prof Yuen project from preparation stage till the performance stage. I think it's one of the best memories I had with my batch-mates during my 4 years of pharmacy study .
One of the best memories in my uni life
Very good lecture
I like the edutainment because it is presented in casual way and more understandable.
It was fun ,i still remember what personalized medicine is

*“Learning shall be fun, it is a stepping stone for your success in life”*

It's great to have a little time for entertainment in class as a way to rest the mind for awhile.
edutainment approach has helped to form closer bonds with my batchmates as I have problems in socializing and interacting with other people. As this approach helps to alleviate my 'social anxiety', it has certainly enabled me to learn the concepts and basic principles in FAR 323 as we were able to share our knowledge in our group and therefore learn better.
It may feel difficult on how to start, but once you know what to do and what you can do, things just become much more easy.
Keep it up
I got the clearer picture of the theory in a fun way. However, the students should really understand the theory before bringing the theory into edutainment so that the message and concept are conveyed well.
I like it
It leaves great memories with friends and lecturer. We can understand the theory easily by watching other groups acting.
Very interesting. Can understand a theory in a faster and effective way.
It helps me to memorize better when my friend acts as an enzyme.
It was fun. It should be continued!
Interesting project to increase the interest of students in learning and participate in the class and application.
I love it as it makes me understand better and try to think out of the box in order to transform education to performance.
Even though we are busy with our lectures, we still manage to create some time to discuss among group members. This shows that everyone is interested with this approach. Keep it up but don't do this for each subject.

*“Learning shall be fun, it is a stepping stone for your success in life”*
