

TEACHING PHILOSOPHY

1. use multiple methods of teaching such as verbally, visual, auditory, and kinesthetic to reach students
2. will always asking student feedback whenever they in my class

Students nowadays mostly have their own unique ways in learning. There will be kind of student that we will be facing . For me, student nowadays really attracted in technology-based learning because it is more fun . So as a teacher we should always keep in track with the technology flow and pattern so that we could attract student in learning

Being a teacher is something that i dreamed and i will achieved it. Teaching is my passion because I love sharing knowledge with others. We shouldn't kept the knowledge just only for ourselves. Also, i want to change my student future . Plus, it had been my parent hope to see their daughter becoming a teacher one day.

- students are individuals and everyone learns in their own unique way. So we as a teacher should not keep on doing one kind of teaching method only . Each student had their own cognitive level
- Doing various of activities can make student learn with each other and most importantly they will get new knowledge and link it with their existing knowledge
- students will fill out a course evaluation of the class. Students will reflect on the course goals and provide feedback whether the course is helping them meet these goals or not. Student will feel valued when teacher asking for opinion.
