TEACHING PHILOSOPHY

Being a teachers is not easy.

Hi everyone! I still remember when my teacher ask me what my ambition. At that time I was speechless because I don't have any ambitions to tell her and my classmate. From that time I'm trying to ask myself what I gonna to be in the future untill I continue studying in form 6 i began to realize that i needed to have new ambitions. But being a future teacher / teacher is not my ambitions. I never think that I will continue study in education. From the first day I was arrive at USM i still can't believe that i will being a teacher in a future. But I have to continue it's a reality that I have to faced it and I don't have any chance to deny it. At the first I think I can't to continue being a teacher I always think I want to change the course. But day by day I started enjoyed trying to ask myself what I gonna to be in the future untill I continue studying in form 6 i began studies in educations. I started learn something new. I started trying something that I never think I will do it. It's always be a nice journey for me. Started from there I believed that teacher become my carrer in the future.

I believed being a good teachers is not easy right? Many challenges and expectation that i have to faces. For example the challenges not only come when you being a teacher but it's comes when you choose to being a future teachers. But I know I have to fight to make sure that journey became a teacher success. As a good teacher in teaching philosophy the first one that I want to to is i have to be skilled and knowledgeable for the subject that i will be teach one day. I must to know everything not even in the only topic that I teach but in the whole subject. And from there I can help my student to became a brilliant and great student.

Next I want to make sure that my student enjoyed in my classes. I will use a instructional strategies to complete my learning. From that I will make sure all of my student not only understand what I teach but they also excited to know the content. This is because in the future I will teach my student history subjet. Many student said that history is too boring. I need to teach them many chronology in history. So from there I need to prepare the strategies that I can ,consider any learning style aptitude as long my student can understand the content. However as a teacher I I need to know that a student's level of understanding is different. So here I need to make sure that the teaching strategies I use are effective to all students. I will make sure that any strategies that I use to interact my student will not left any student behind.

In the pandemic I realize that technology is important in our system education.

For sure in the future I will use platform online such as kahoot, classroom, Google meet or webex

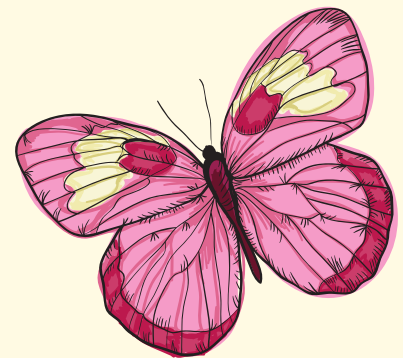

in teaching and learning to my student. So I have to make sure that I prepare because I have to

help my student to access the real world of technology's. To make sure my teaching using a

technology's become effective for my student, I have practice using the technology's until

I am proficient. Finally, I really hope one day I will be the teachers that leave my student

positive impression in my teaching.

That all
