

# The technology that I learnt in PGT436E

I wish I can get many benefits in how to use the technology if I take the similar subject like PGT436e

## Powtoon

Through powtoon, I was able to learn how to produce animated videos. Powtoon has also become a popular choice for producing engaging and interactive videos. Although the duration of the video is short but effective to deliver convey information. Ideal for all learning topics.

## Canva

Canva is a very fun and useful app. This is because I can make posters, infographics and presentations that are very interesting and easy to use. I also have the freedom and can use my creativity to make presentations of my coursework. If every time I get an assignment, there is no doubt that Canva will be my first choice.

## Genially

The advantage of using Genially is the ability to integrate with other tools. This makes it possible to integrate all kinds of content. I can enrich my microsite with Google Forms or Typeform forms, Google Maps locations, videos and any other resources I can think of. Genially integrates with hundreds of tools.

## Podcast

The advantage of podcast is the demographics. Podcasting enables me to reach many of listeners outside who has the chance to listen to my programs when they choose. Moreover, listeners have the privilege to listen again to the program that has already aired besides being able to play or pause and to rewind or fast forward.

## Thinglink

Thinglink offer me an alternative to traditional assignment and presentation formats. These types of tools allow me to create new presentations based on my imagination. Thinglink provides me to share my creations on social networks.
