Group 5 (12/4/2021)

Vibrio parahaemolyticus Infections Associated with Consumption of Raw Shellfish --- Three States, 2006

What?
A total of 177 cases of Vibrio parahaemolyticus of which 122 have been associated with consumption of raw shellfish.

Where?
New York City (two confirmed, 74 probable)
New York state (seven confirmed)
Oregon (eight confirmed, eight probable)
Washington (55 confirmed, 23 probable)

When?
During May 20–July 31, 2006 (during warmer months)

Who?
A cluster has been defined as a group of persons who were linked to the same restaurant (e.g., shared a meal at the same restaurant, consumed shellfish from the same seafood market).
